DETAILED ACTION

1. This Office Action is the answer to the Amendment filed on February 20, 2009, which paper has been placed of record in the file.
2. Claims **21- 25** are pending in this application.

Allowable Subject Matter/Reasons for Allowance

3. Claim 24 is allowed over the prior arts cited records.

The closest prior arts are:

Pitroda (5,884,271) is directed to a universal electronic transaction (UET) card to allow a user to consolidate a number of plastic cards. Pitroda does not disclose receiving an IC card with a service request and digital signature from the user, reading said service request and said digital signature recorded on said IC card to determine whether said service request and said digital signature are valid, or calculating the fee and collecting the fee from the user when it is determined that said service request and said digital signature are valid. Rather, *Pitroda* discloses that a main central computer authorizes and verifies a transaction amount when the UET card is connected through a communication interface to a point of sales terminal. (col. 14, lines 35-50.) *Pitroda* teaches that its UET card stores all sorts of personal information, credit card information, healthcare information, insurance information, etc., and so it would be unreasonable for this card to be received from a user to determine whether a service request and digital signature are valid, for security reasons. Furthermore, *Pitroda* does not even specifically disclose the use of a digital signature, which is recorded along with

the service request in the IC card. The "digital signature," as recited in the claims, is not equivalent to an "electronic signature," as recited in *Pitroda*. One of ordinary skill in the art would understand that a digital signature refers to a specific security measure, whereas *Pitroda* seems to refer to an electronic signature with respect to simple signature stored electronically. (See col. 16, lines 20-25.)

Spies (US 6,055,314) is directed to a method for secure purchase and delivery of video content. In particular, *Spies* discloses that a viewer is issued an IC card that is configured with cryptographic functionality to support a secure purchase from the video merchant. (col. 2, lines 31-42). In *Spies*, the IC card interfaces with a merchant computing unit and is used to decrypt video content. The IC card can be connected to a merchant's computing unit (col. 6, lines 11-33) or can be connected to a purchaser's computer (col. 6, lines 34-58), a purchaser selects a video program, and a cryptographic program key is downloaded to the IC card. To provide security, credentials and cryptographic program keys are exchanged during the purchase transaction. (col. 6, lines 59-61). To this end, the IC card executes various cryptographic functions (described in col. 7), and sends encrypted information and credentials of the IC card to the video merchant to verify the IC card. (col. 7, lines 62-67.) After the IC card has been verified, the video merchant then grants the purchaser decryption capabilities. (col. 8, lines 26-28.) In a later embodiment, *Spies* discloses another video delivery system that uses an IC card with cryptographic functions to provide secure delivery. *Spies* discloses that a subscriber inserts the IC card into a set-top box (STB) to decrypt a video program. (col. 15, lines 1-8.) When the subscriber orders a program, the IC card digitally

signs the order and payment instructions and transmits them over the network to the headend server. (col. 15, lines 51-59.) Thus, *Spies* does not disclose the step of receiving a request from said service provider to collect the fee from a user, receiving an IC card with service request data and digital signature data from the user, or calculating the fee using the service request data on the IC card when it is determined that said service request and said digital signature recorded in the IC card are valid. Rather, *Spies* simply discloses that a video merchant or headend server (i.e., the service provider) reads encrypted information from the IC card to verify its authenticity, and if it is valid, allows the IC card to decrypt video content.

Therefore, it is clear from the description of Pitroda and *Spies*, that the prior arts do not considered the possibility of: A system for collecting a fee for a service of a service provider comprising: an IC card receiving unit which receives an IC card from the user, said IC card including service request data and digital signature data stored thereon; a reading unit associated with said IC card receiving unit which reads said service request data and said digital signature data stored on said IC card, **as included in claim 24.**

4. Claims (21-23 and 25) are allowed because they are dependent claims of the allowable independent claim 24 above.

Conclusion

5. Claims **21-25** are allowed.
